QUALITY ASSISTANCE :

The Mitose project, led by Quality Assistance, involves the construction of a mixed-use building incorporating offices, relaxation areas and state-of-the-art laboratories. The central space, marked by

the presence of an amphitheatre, divides the building into two parts: on one side, 1,200 m^2 of laboratories spread over two levels, and on the other, spaces dedicated to the well-being of workers (a refectory, a fitness room) and administration. The project offers high-quality outdoor spaces in keeping with the surrounding rural context.
Taken as a whole, the Mitose project embodies a modern and sustainable vision of work, combining innovation, functionality and quality of life for users.
